

AMCP Webinar Series

Innovative Approaches to Improve Transitions of Care: An update from the Hawaii Pharm2Pharm Initiative

17 September 2014

Disclaimer

Organizations may not re-use material presented at this AMCP webinar for commercial purposes without the written consent of the presenter, the person or organization holding copyright to the material (if applicable), and AMCP. Commercial purposes include but are not limited to symposia, educational programs, and other forms of presentation, whether developed or offered by for-profit or not-for-profit entities, and that involve funding from for-profit firms or a registration fee that is other than nominal. In addition, organizations may not widely redistribute or re-use this webinar material without the written consent of the presenter, the person or organization holding copyright to the material (if applicable), and AMCP. This includes large quantity redistribution of the material or storage of the material on electronic systems for other than personal use.

AMCP Activities

- Report of the 2013 AMCP Partnership Forum on Electronic Solutions to Medication Reconciliation and Improving Transitions of Care (September 2014 – JMCP)
 - (<http://www.amcp.org/JMCP/2014/September/18487/1033.html>)
- Key Recommendations for AMCP:
 - Encourage the implementation of electronic solutions to the MedRec processes.
 - Work with MCO stakeholders and hospitals to pilot and measure different approaches to electronic solutions to MedRec.
- Currently - one pilot program in development
 - Will measure: impact on 30-day readmissions, utilization and costs at 3 and 12 months (all-cause ER and hospital visits, adherence, evidence based medications, avoidance of high-risk medications, number and cost of medications)

Today's Speaker

Karen L. Pellegrin, PhD, MBA

Karen is Director of Continuing Education and Strategic Planning, Founding Director of the Center for Rural Health Science, and senior faculty at the Daniel K. Inouye College of Pharmacy at the University of Hawai'i at Hilo. She is PI & Project Director for the Health Care Innovation Award, funded by the CMS Innovation Center, to implement the Pharm2Pharm model in Hawai'i.

Today's Speaker

Reece Uyeno, PharmD

Reece is the Hospital Consulting Pharmacist Manager for the Pharm2Pharm project, overseeing the inpatient component of the model state-wide. While at Kona Community Hospital, he enrolled and handed off over 200 patients to a Community Consulting Pharmacist. Reece is a graduate of the Daniel K. Inouye College of Pharmacy at the University of Hawai'i at Hilo.

Today's Speaker

Francis Chan, MT (ASCP),
MPH

Francis is Director of HIE Services for Hawai'i Health Information Exchange, working with key stakeholders to design and implement the components of HIE architecture needed to facilitate Health Information sharing among providers in the State HIE. He is leading the design and implementation of the HIT to improve the efficiency and effectiveness of the Pharm2Pharm model.

Today's Speaker

Natalie Pagoria, MD

She contributes a clinical perspective to the operations of the HHIE with particular focus on the Pharm2Pharm HIT program. Natalie earned her Doctor of Medicine degree at Loyola University Stritch School of Medicine in Chicago. After medical school Dr. Pagoria moved to Hawaii and completed an internship year with the Hawaii Residency Program Department of Surgery.

The vision of Pharm2Pharm

•Leverage underutilized pharmacist expertise across the continuum of care to achieve the three-part aim of the CMS Innovation Center:

- Better care
- Better health
- Lower total costs

"Pharm2Pharm" = "Hospital Pharmacist to Community Pharmacist" care transition and coordination model focused on medications

**Before there was Pharm2Pharm,
there was The Minnesota experience...**

- ***“Beginning in 1999, Fairview Health Services of Minneapolis/St. Paul implemented the ‘Collaborative Practice of Pharmaceutical Care’ at 6 of 15 primary care clinics, where pharmacists now play an integral role in the delivery of care”**
- ***RESULTS:**
 - Improvements in clinical outcomes
 - Reductions in cost

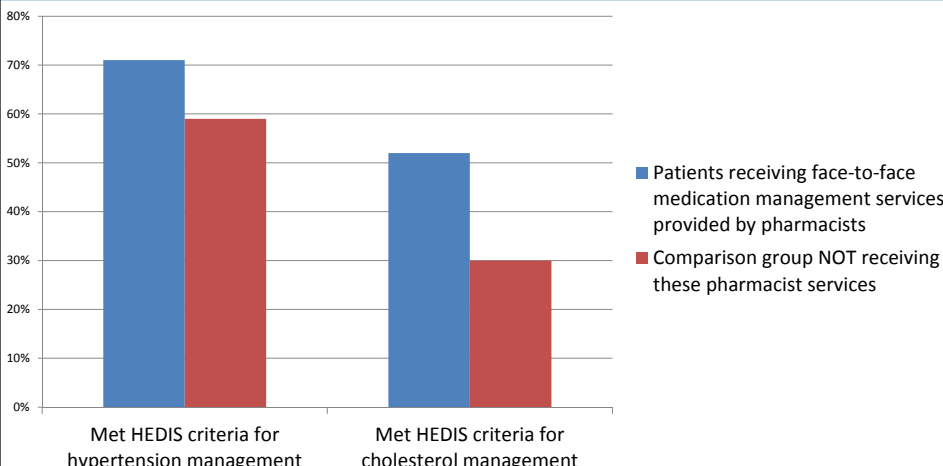

*Isetts et al., **Clinical and economic outcomes of medication therapy management services: The Minnesota experience.**
J Am Pharm Assoc. 2008;48:203-214
<http://japha.org/article.aspx?articleid=1043431#Methods>

www.amcp.org

©2014 Academy of Managed Care Pharmacy

Improved patient outcomes

Met HEDIS criteria for	Patients receiving face-to-face medication management services provided by pharmacists	Comparison group NOT receiving these pharmacist services
hypertension management	~71%	~59%
cholesterol management	~52%	~30%

Hospital Consulting Pharmacist Manager, Pharm2Pharm
 University of Hawaii, Daniel K. Inouye College of Pharmacy

Model implementation to date

- Launched in 4 counties: Maui, Kauai, Hawaii, Honolulu
- Over 1,500 patients enrolled and handed off to Community Consulting Pharmacists
- Through intensive CQI efforts, implemented and revised
 - Standard Operating Procedures
 - “Toolkit”
 - Training

www.amcp.org

©2014 Academy of Managed Care Pharmacy

HIT progress via HHIE

- Lab access: Majority of physicians have authorized the Consulting Pharmacists to have access to their enrolled patients' labs via HHIE
- HCS med module: Consulting Pharmacists are now using HCS to conduct preliminary medication reconciliation and maintain accurate medication list.
- Virtual translation service: Now available to Community Consulting Pharmacists, allowing non-English speaking patients to be enrolled

Secure messaging: All care transition documents are now being sent by the Hospital Consulting Pharmacist to the Community Consulting Pharmacist via HHIE's secure messaging system

Longitudinal fill history screen shot: shows gaps in med use

The screenshot displays a 'Patient Timeline' window with the following details:

- Time Range:** 3/ 1/2013 to 5/31/2014
- Filters:** Visits (All Standard, All, This Visit), Home Meds, Inpatient Meds, Other Facility Visits, Home Fills, Providers, Problems, Observations/Labs, Diagnoses, Docs.
- Timeline Grid:** Shows medication use from 03/13 to 05/14. Red bars represent filled periods, while gaps indicate periods of no use.
- Medications and Doses:**
 - meclizine: 25 mg
 - oxyCODONE: 10 mg
 - coagulation modifiers: 75 mg
 - gastrointestinal agents: 40 mg, 100%
 - metabolic agents: 60 mg/ml, 5 mg
 - insulin aspart: 30 units-70 units/ml
 - metFORMIN: 1,000 mg
 - pioglitazone: 15 mg
 - rosuvastatin: 10 mg
 - nutritional products: 20 mEq

Interaction checker identifies drug-drug, drug-disease, duplicates and drug allergy interactions.

Alerts	Type	Medication	Severity	Rec. Action
4	Allergy	hydrochlorothiazide ordered with sulfa drug		
5	Duplication	More than 1 loop diuretics ordered: furosemide		
6	Duplication	More than 1 anticoagulants ordered: apixaba		
7	Duplication	More than 1 antidepressants ordered: St. Jol		
8	Interaction	diltiazem and ranolazine	Major Drug Interaction	Adjust Dose
1	Interaction	riluzidazole and apixaban	Major Drug Interaction	Monitor Closely

Details

ADJUST DOSE: Coadministration with inhibitors of CYP450 3A4 may increase the plasma concentrations of ranolazine, which is primarily metabolized by the isoenzyme. Because ranolazine prolongs QT interval in a dose-dependent manner, high plasma levels of ranolazine may increase the risk of ventricular arrhythmias such as ventricular tachycardia, ventricular fibrillation, and torsade de pointes. In pharmacokinetic studies, plasma levels of ranolazine (1000 mg twice a day) were increased 3.2-fold by the potent CYP450 3A4 inhibitor, ketoconazole (200 mg twice a day), and 1.8- to 2.3-fold by the moderately potent inhibitor diltiazem (180 to 360 mg/day). Plasma levels of ranolazine (750 mg twice a day) were increased about 2-fold by the CYP450 3A4 and P-glycoprotein inhibitor, verapamil (120 mg three times a day).

MANAGEMENT: The dosage of ranolazine should not exceed 500 mg twice a day when coadministered with moderate inhibitors of CYP450 3A4, including but not limited to diltiazem, verapamil, aprepitant, erythromycin, fluconazole, and grapefruit juice. Patients should be advised to seek medical attention if they experience symptoms that could indicate the occurrence of torsade de pointes such as dizziness, palpitations, or syncope.

Printable Patient Education Materials

clopidogrel

Praxista: clopidogrel

Trade: Plavix

What is the most important information I should know about clopidogrel?

Your doctor will perform blood tests to make sure you do not have certain genetic conditions that would prevent you from safely using clopidogrel.

- You should not use this medicine if you have any active bleeding such as a stomach ulcer or bleeding in the brain (such as from a head injury).

Some medicines can interact with clopidogrel and should not be used at the same time. Your doctor may need to change your treatment plan if you also take other medicines, especially certain stomach acid reducers (esomeprazole, omeprazole, Nexium, Prilosec).

What is clopidogrel?

Clopidogrel keeps the platelets in your blood from coagulating (clotting) to prevent unwanted blood clots that can occur with certain heart or blood vessel conditions.

Clopidogrel is used to prevent blood clots after a recent heart attack or stroke, and in people with certain disorders of the heart or blood vessels.

Clopidogrel may also be used for purposes not listed in this medication guide.

What should I discuss with my healthcare provider before taking clopidogrel?

- You should not use this medicine if you are allergic to clopidogrel, or if you have any active bleeding such as a stomach ulcer or bleeding in the brain (such as from a head injury).

Some medicines can interact with clopidogrel and should not be used at the same time. Your doctor may need to change your treatment plan if you also take other medicines, especially certain stomach acid reducers (esomeprazole, omeprazole, Nexium, Prilosec).

To make sure clopidogrel is safe for you, tell your doctor if you have:

- a bleeding or blood clotting disorder, such as TTP (thrombotic thrombocytopenic purpura) or hemophilia;
- a history of stroke, including TIA ("mini-stroke");
- a stomach ulcer or ulcerative colitis;
- kidney disease; or
- if you are allergic to medicines like clopidogrel, such as prasugrel, ticagrelor, or ticagrelor.

FDA pregnancy category B. This medication is not expected to be harmful to an unborn baby. Tell your doctor if you are pregnant or plan to become pregnant during treatment.

- It is not known whether clopidogrel passes into breast milk or if it could harm a nursing baby. You should not breast-feed while using this medicine.

How should I take clopidogrel?

Follow all directions on your prescription label. Do not take this medicine in larger or smaller amounts or for longer than recommended.

Clopidogrel can be taken with or without food.

- Because clopidogrel keeps your blood from clotting, it can also make it easier for you to bleed, even from a minor injury. Contact your doctor or seek emergency medical attention if you have bleeding that will not stop.

If you need surgery or dental work, tell the surgeon or dentist ahead of time that you are using clopidogrel. You may need to stop using the medicine for at least 5 days before having surgery, to prevent excessive bleeding. Follow your doctor's instructions and start taking clopidogrel again as soon as possible.

- You should not stop using this medicine suddenly. Use clopidogrel regularly even if you feel fine or have no symptoms. Get your prescription refilled before you run out of medicine completely.

- Store at room temperature, away from moisture and heat.

Pharm2Pharm Challenges and Lessons Learned with Health Information Exchange

Academy of Managed Care Pharmacy®

Hardware/Software Challenges

- Hardware Challenges
 - Aging pharmacy equipment for users
 - Limited access to functioning computers
 - Pharmacists with limited computer skills
 - Not all programs supported by all operating systems
 - No one-size fits all solution/product i.e. Scheduling Tool, Patient Registry
- Hardware, Software and Support Process
 - Standardized Acer tablets
 - One-on-one live user training on computer and programs
 - Thorough step-by-step user guides
 - In house program development
- Lesson Learned
 - Test, test and then test again.

Academy of
Managed Care
Pharmacy®

©2014 Academy of Managed Care Pharmacy

Network Connectivity Challenges

- Network Connectivity Challenges
 - Highly variable internet access and reliability, especially in rural settings
 - No access for Pharmacists while in the field
 - Unsecure, shared connections
 - “Bring your own device”: policies at medium-sized Pharmacies
 - Hospital Security Policies and Firewalls
 - Competing health system priorities
- Network Connectivity Solutions
 - Secure mobile Wi-Fi devices
 - Synchronous broadband internet
 - Parallel development of HIE and Meaningful Use Support
- Hardware and Network Lessons Learned
 - Need to have strong community leadership support from the start
 - Get the organizations “Compliance” team involved early
 - Get the organizations “IT Team” involved early

Policy and Security Challenges

- Policy and Security Challenges
 - State Law prohibits lab from sharing lab results with pharmacist without approval of ordering provider
 - Pharmacists receiving large quantities of sensitive PHI, papers would be sent to pharmacy and sit on fax machine
 - Allowing access to PHI for only “the right patients”
- Policy and Security Solutions:
 - Provider authorization campaign by lab representatives and lab feed into Medication Reconciliation and Decision Support Tool
 - Direct secure email eliminates fax and ensures delivery to appropriate person
 - Strong DSA's and user provisioning process
 - Role based access, procedural control, provider mapping, strict auditing
- Lessons Learned:
 - Thorough legislative review necessary early in planning process
 - Innovation is an iterative process, need to be constantly re-evaluated and revised

Medication measures through July 2014...

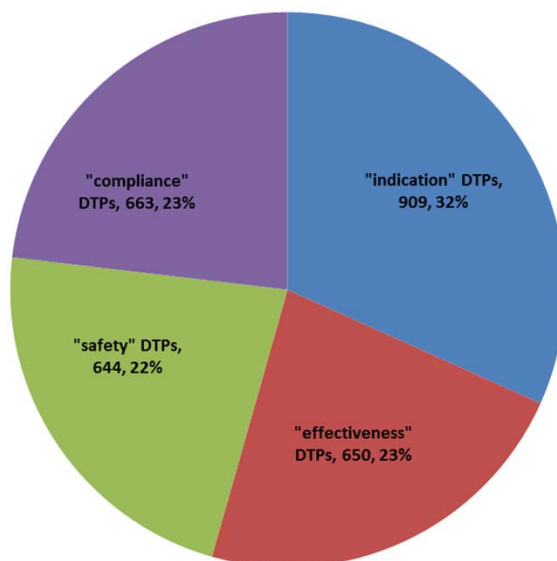

- 84% of patients' medications were reconciled by the Community Pharmacist within 30 days post discharge
- >2,800 drug therapy problems were identified
- 44% of drug therapy problems identified were resolved by the next patient visit
- In 7% of visits with the Community Pharmacist, the patient reported medication access problems
- 39% of medication access problems were resolved by the Community Pharmacist

- Too many positive comments to list here, but they include:
 - She gave me a print out list of all my meds and dosages. I made copies and now carry that in my purse for emergency. This was incredibly import and valuable. Being called and checked on helped me stay on track
 - Keeps me on my toes
 - helped a lot by discussing each medication and what it does for you or not
 - **This pharmacist has kept me out of the hospital on at least 2-3 occasions. Kept me out of ER 3+ times... Understanding your meds is so important. They do a super job. Every day counts.**
 - Ever since I met this Pharmacist I became very interested into listening an paying attention to everything she said and I got really interested doing things I never done before. Do not stop this program there's people out there that need this services
 - **We sat down together and explained what each pill does for me. I was so thankful for him to help me back to my old self. I would never "trade" him for any other pharmacist in the world. He's the BEST**
 - My Pharmacist was extremely helpful beyond my expectations.
 - Very professional and knowledgeable. Seemed very interested in my health. I was able to communicate with her very well.
 - **This program has changed my life - I have returned to my old self; I can sleep at night, fear of never waking is gone. No more inhaler and wheezing. Not so many pills and knowing when or when not to take them also the security of knowing I have someone to talk with when I have a question or problem. Thank you for my life back, and I really mean this**
 - A very enlightened program. Pharmacists are underutilized. They have a wealth of experience and knowledge

Thoughts about PCMH and P2P...

- Recent finding reported in JAMA*:

CONCLUSIONS AND RELEVANCE A multipayer medical home pilot, in which participating practices adopted new structural capabilities and received NCOA certification, was associated with limited improvements in quality and was not associated with reductions in utilization of hospital, emergency department, or ambulatory care services or total costs over 3 years. These findings suggest that medical home interventions may need further refinement.
- *Is medication management the missing link in achieving aims of PCMHs?*

*Friedberg MW, Schneider EC, Rosenthal MB, Volpp KG, Werner RM. Association between participation in a multipayer medical home intervention and changes in quality, utilization, and costs of care. *JAMA*. 2014; 311(8):815-825

NCQA PCMH standards

3/25/13

- PCMH 1: Enhance Access and Continuity
- PCMH 2: Identify and Manage Patient Populations
- **PCMH 3: Plan and Manage Care (includes Element D below)**
- PCMH 4: Provide Self-Care Support and Community Resources
- PCMH 5: Track and Coordinate Care
- PCMH 6: Measure and Improve Performance

Element D: Medication Management	3 points		
The practice manages medications in the following ways.	Yes	No	Enter Percent
1. Reviews and reconciles medications with patients/families for more than 50 percent of care transitions**	<input type="checkbox"/>	<input type="checkbox"/>	
2. Reviews and reconciles medications with patients/families for more than 80 percent of care transitions	<input type="checkbox"/>	<input type="checkbox"/>	
3. Provides information about new prescriptions to more than 80 percent of patients/families	<input type="checkbox"/>	<input type="checkbox"/>	
4. Assesses patient/family understanding of medications for more than 50 percent of patients with date of assessment	<input type="checkbox"/>	<input type="checkbox"/>	
5. Assesses patient response to medications and barriers to adherence for more than 50 percent of patients with date of assessment	<input type="checkbox"/>	<input type="checkbox"/>	
6. Documents over-the-counter medications, herbal therapies and supplements for more than 50 percent of patients/families, with the date of updates	<input type="checkbox"/>	<input type="checkbox"/>	

www.amcp.org

To be the best (i.e., “level 3”) PCMH per NCQA

- Need 85-100 points
- Must pass the “must pass” elements
- Element D: Medication Management is NOT a “must pass” element

Points	Standard/Element	Must-Pass = 50% Score
17	PCMH 3: Plan and Manage Care	
4	Element A Implement Evidence-Based Guidelines	
3	Element B Identify High-Risk Patients	
4	Element C Care Management	✓
3	Element D Medication Management	
3	Element E Use Electronic Prescribing	

www.amcp.org

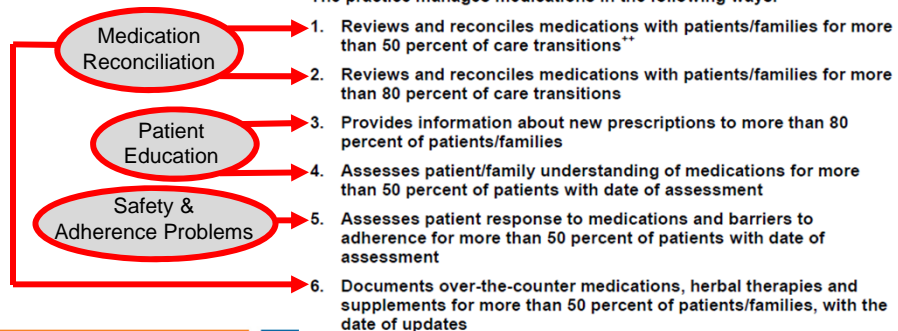

Academy of Managed Care Pharmacy®

Would “must pass” be enough?

- Current standards are missing two key drug therapy problems:
 - Appropriateness / indication problems
 - Effectiveness problems

Element D: Medication Management

The practice manages medications in the following ways.
